PATENTED INTEGRATED BATTERY SYSTEM FOR E-BIKES

Sporty look of e-bikes thanks to integrated battery system

Swiss designer Andy Muff did develop a new system to integrate the e-bike battery into the frame design for which solution he got the patent now. By using specially shaped down tube, battery case and covers it's possible to make the battery nearly invisible or part of the frame – see picture below. With this solution it's possible to design e-bikes which doesn't looks like. It can be adapted to most electric assist systems such as front hub motors, rear hub motors and central motors. You can find this integrated battery solution at the Eurobike booth A2-401C of Andy Muff GmbH or on www.conceptcycle.com
